CHARACTER REFERENCE AND RECOMMENDATION

As the director of **Peter Corrigan Consulting Engineers LTD**, a company that provides bespoke surveying solutions to clients across Europe, I had the privilege of working with **Oleksii Yermakov** – Setting Out Engineer (Survey Engineer), whose professionalism, technical acumen, and dedication significantly impacted our operations.

During his tenure on a data centre construction project in Kelsterbach, Germany, Oleksii proved to be a reliable and self-reliant member of the on-site engineering team. His responsibilities encompassed a diverse range of surveying and construction coordination tasks, particularly within the scope of high-rise construction and steel structure erection.

His core duties included:

- Executing high-precision survey measurements for the monitoring of concrete and steel structural elements.
- Setting out construction components in strict adherence to detailed design and as-built drawings.
- Ensuring dimensional accuracy and design compliance, particularly in reconciling discrepancies in levels, axes, and fixing points.
- Compiling and updating as-built documentation using standard formats and software tools.
- Working closely with site managers, subcontractors, and engineers to ensure safe and technically sound project execution.
- Preparing and managing setting-out operations for structural assembly across multiple building levels.
- Producing clear and timely reports, visual records, and digital survey data for internal and client documentation.
- Diagnosing and resolving issues arising from discrepancies between the design model and on-site reality with a practical, solution-oriented approach.

Operating within the challenging environment of a multi-story industrial and administrative facility, Oleksii consistently demonstrated a high degree of autonomy, responsibility, and attention to detail. His understanding of construction methodology, combined with his proficiency in modern surveying instruments and digital platforms, directly contributed to the project's success.

At PCCE, we highly value individuals who combine technical excellence with a collaborative spirit. Oleksii possesses both. I confidently recommend him as a highly skilled and dependable Survey Engineer, ideally suited for any construction project demanding quality, precision, and teamwork.
